

Code of Practice (COP) Webinar

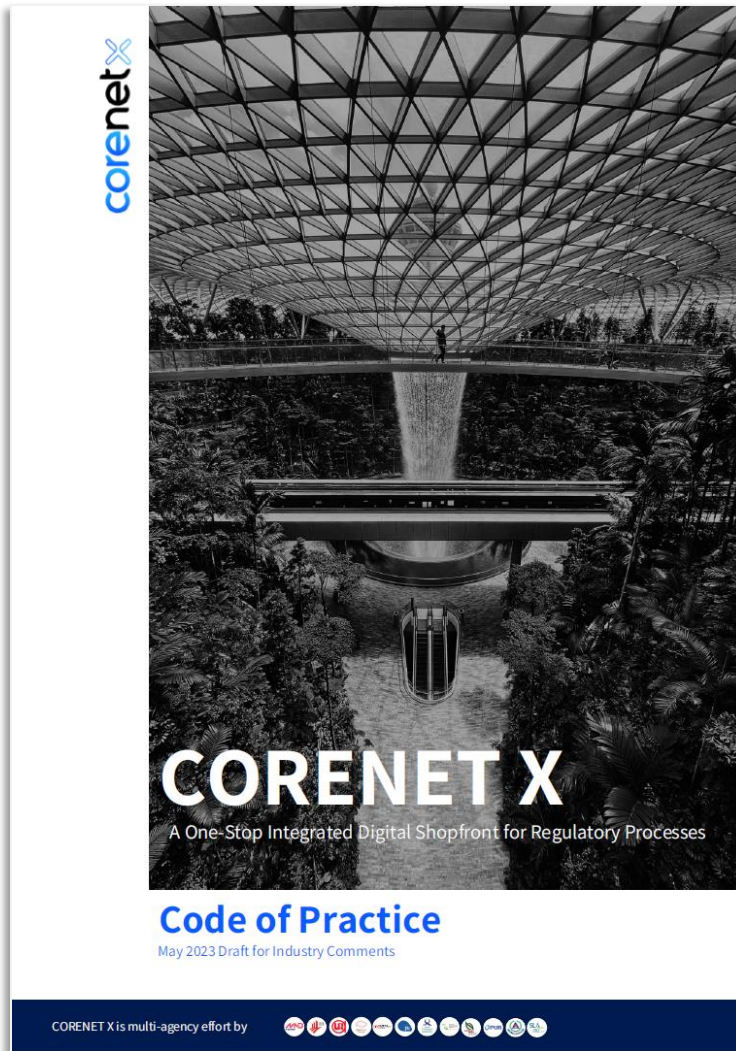

15 JUNE 2023

Code of Practice (COP) Webinar

Intent and Disclaimer of the Draft COP

- ✓ Guide on how to prepare regulatory submissions on CORENET X
- ✓ Obtain industry's feedback for refinement
- ✓ **Draft** will be continuously updated as the:
 - Team incorporates industry feedback;
 - CX features and requirements are developed progressively

How to use the COP?

corenetX		Page
Preamble		3
How to use this Code of Practice		5
Section 1: Introduction to CORENET X		6
Section 2: General Requirements		12
Section 3: Specific Requirements by		
➤ Regulatory Agencies		28
➤ Project Disciplines		69
➤ Key Gateways		116
Section 4: BIM Data Representation (IFC-SG) and Modelling Good Practice		171

Section 1: Introduction to CORENET X

- What is CORENET X?
- What are the key aspects of CORENET X?
- What is a user journey of CORENET X like?

How to use the COP?

- What is a user journey of CORENET X like?

Section 1: Introduction to CORENET X

Today's Separate and Concurrent Regulatory Approval Process

Envisaged Streamlined Regulatory Approval Process

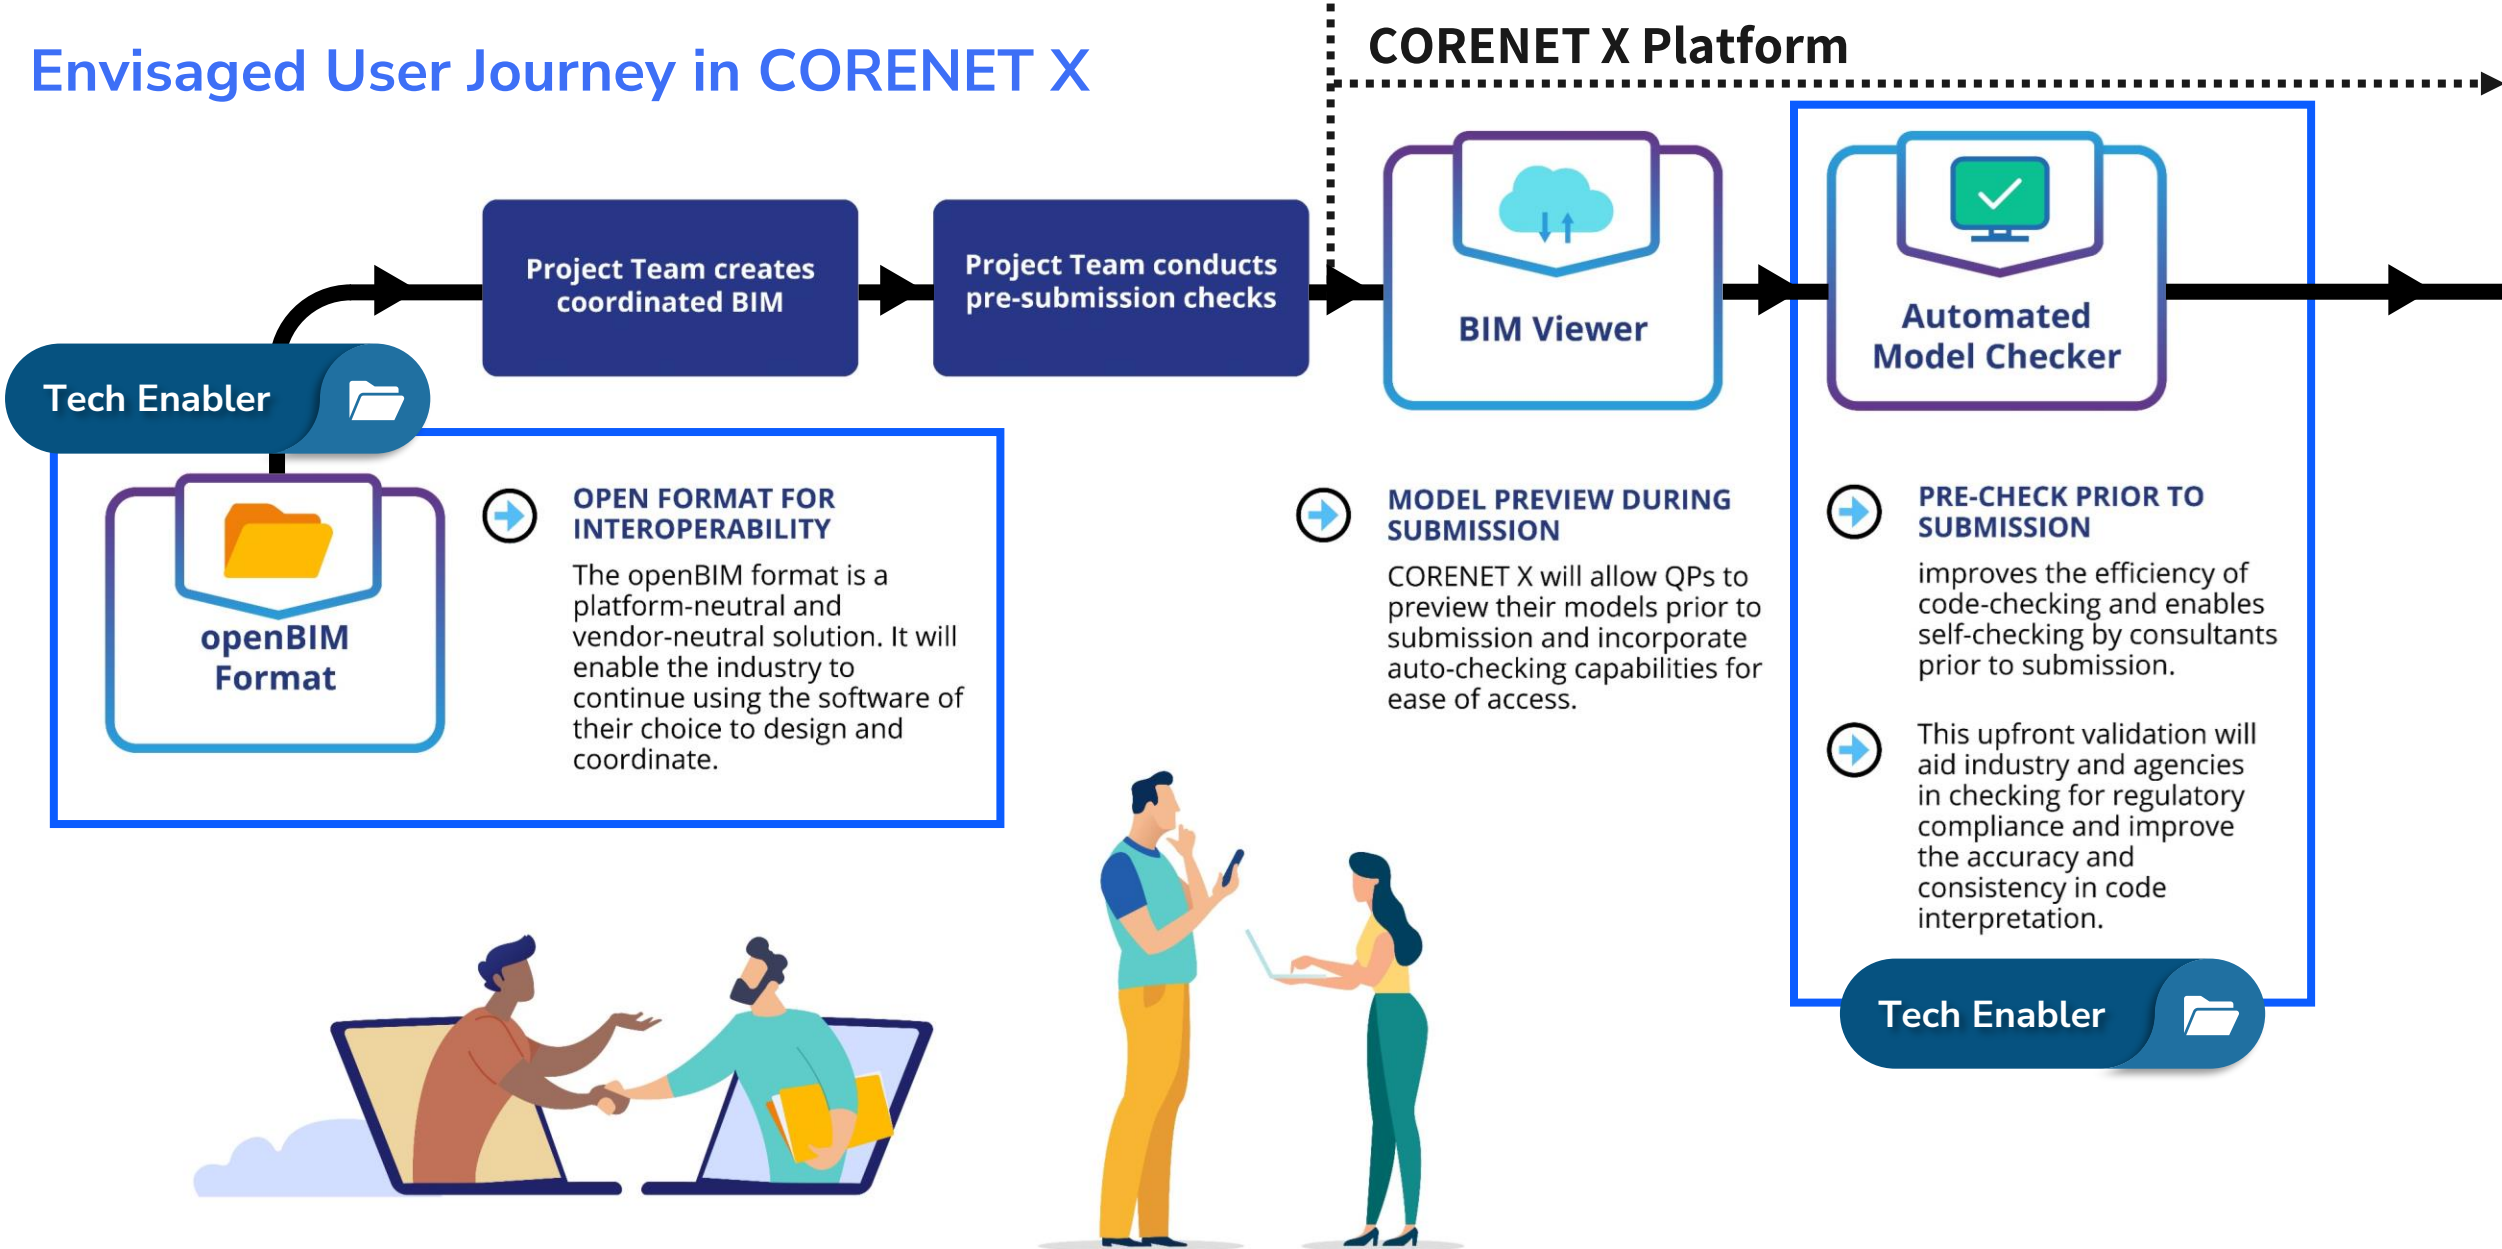

CORENET X will transform and redesign our regulatory processes into **3 main gateways**

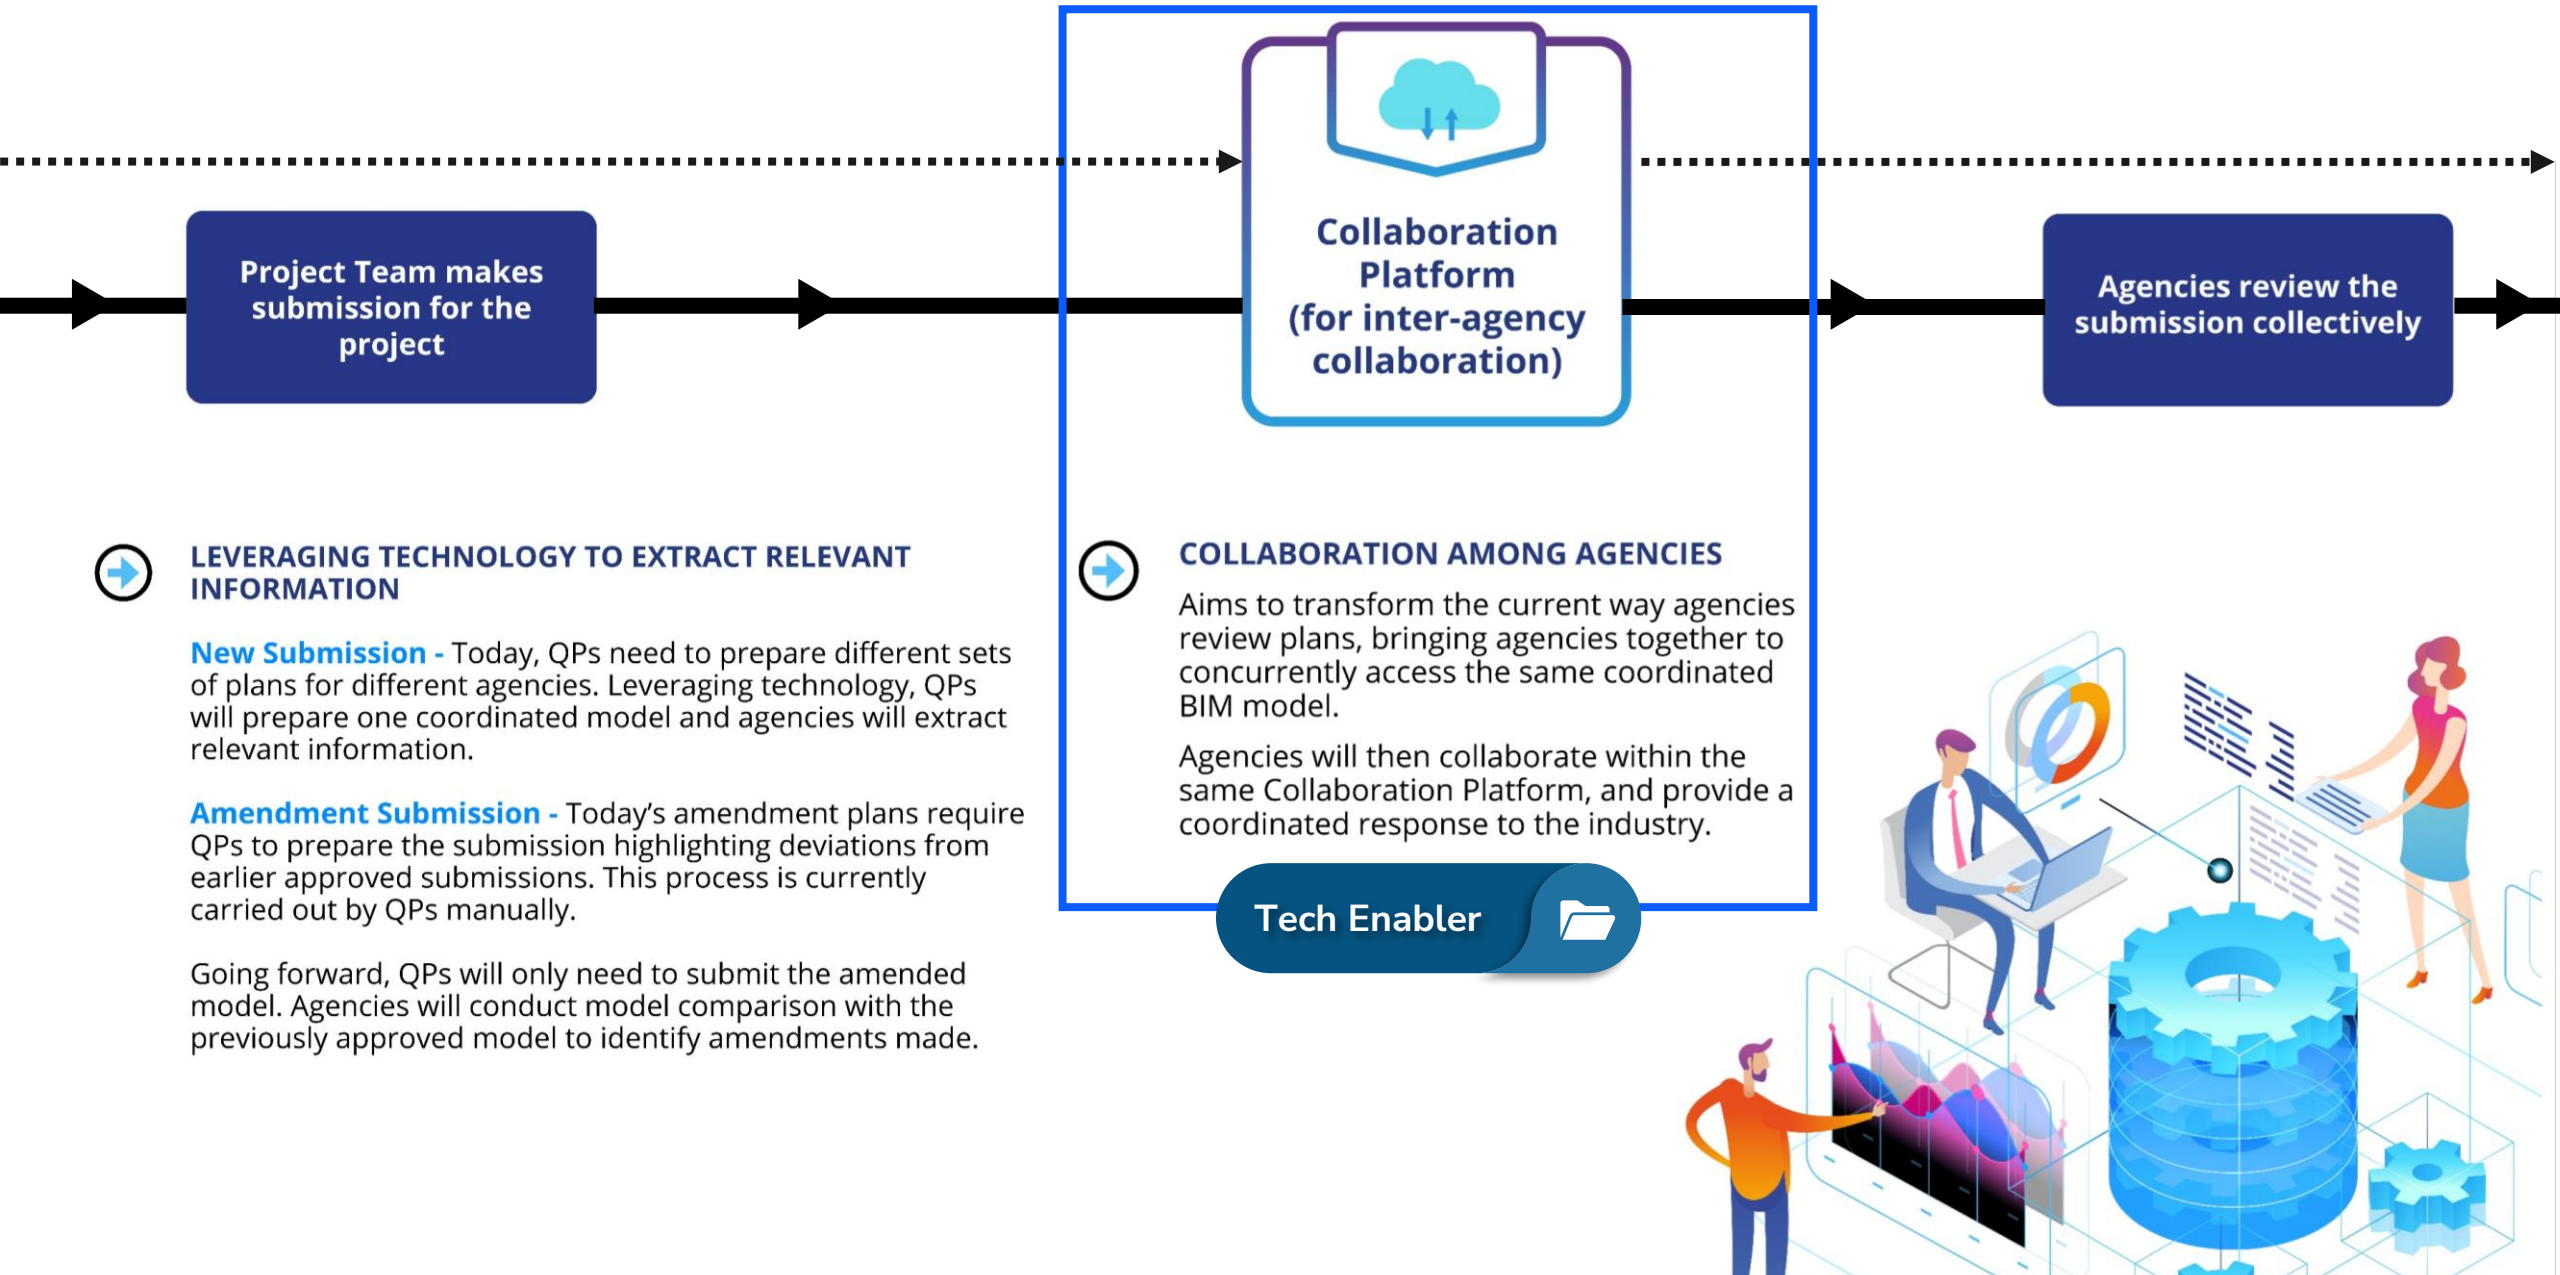

A future *ecosystem* of Regulatory Approval of Building Works that accelerates the transformation of the Construction Industry

Section 1: Introduction to CORENET X

Envisaged User Journey in CORENET X

Section 1: Introduction to CORENET X

Section 1: Introduction to CORENET X

CORENET X Platform

Agencies issue a consolidated response to the Project Team

ENABLES CLEARER COMMUNICATION

Today's Written Direction and comments from agencies are provided in a list to the QPs.

Leveraging technology, the comments will also be provided in the BIM Collaboration Format (BCF), which allows tracking and tagging of comments directly to the BIM model.

This aims to improve the current communication between industry and agencies.

Section 2: General Requirements

- Which agency's approvals are covered under CORENET X?
- What do abbreviations like RABW and IFC-SG stand for?
- What happens to the QP's statutory obligations under CORENET X?
- What is each project team submission like and maximum file size?
- What is the model preparation process like?

Section 2: General Requirements

Two Terms to Highlight

✓ **RABW:**
Regulatory Approval Process for Building Works

✓ **IFC-SG:**
Industry Foundation Classes – Singapore (Regulatory Version)

Term	Definitions
RABW	Abbreviation for “Regulatory Approval Process for Building Works” ➤ Refers to the new sequential process related to CORENET X Gateways. More information of the RABW can be found here .
Gateways	Major submission milestones in CORENET X, where the submission needs to comply with multiple agencies’ statutory requirements.
Supporting Mechanisms	Similar to today, there are 3 supporting mechanisms will continue to complement the approval process: 1. Pre-Submission Consultation <ul style="list-style-type: none"> Pre-submission consultation will continue to be available for industry to consult or seek clarification prior to submission. 2. Waivers <ul style="list-style-type: none"> Where necessary, the industry may apply for waiver under the respective Act and Regulations and the respective agency will assess the applications accordingly. 3. Escalation Mechanism <ul style="list-style-type: none"> Industry can table their case to seek resolution on inter-agency regulatory conflicts at the Inter-agency Coordinating Committee (IACC)
Federated Model	Combined Building Information Model that compiles multiple models from different disciplines or sections of the project into a single, complete model of the project. <ul style="list-style-type: none"> Federated models support concurrent authorship of different aspects of the project by multiple parties. Federated models also support multi-disciplinary coordination as models are geo-referenced to coordinates from the Singapore SVY21 coordinate system (EPSG: 3414) for Easting and Northing (x,y) and Singapore Height Datum (SHD) for Height (z).
IFC-SG	New representations for local regulatory requirements, in the Industry Foundation Classes (IFC) openBIM standard. More information of the mapping and configuration files for IFC-SG can be found here .
Level of Details	As long as relevant IFC-SG data requirements are embedded in the respective BIM components and minimum dimensions represented, BIM components do not need to replicate their real-life equivalent. For example, trees can be represented as a lollipop object as long as IFC-SG parameters like “Girth”, “Height” and “Status” are represented. 
Non-BIM submissions	Besides BIM submissions in the IFC-SG format, CORENET X will be able to accept non-BIM submissions.
Supplementary Documents	CORENET X will be able to accept non-BIM documentations that accompany each project team’s submission of IFC-SG models (e.g. design calculation reports, 2D detail drawings)

Section 2: Component Clashes Matrix

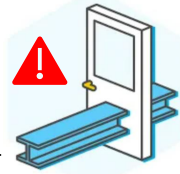

Component Clashes

- ✓ Listed 13 of the **basic** discipline components that **shall not clash** with one another for a CX submission

Note: This matrix is not exhaustive.

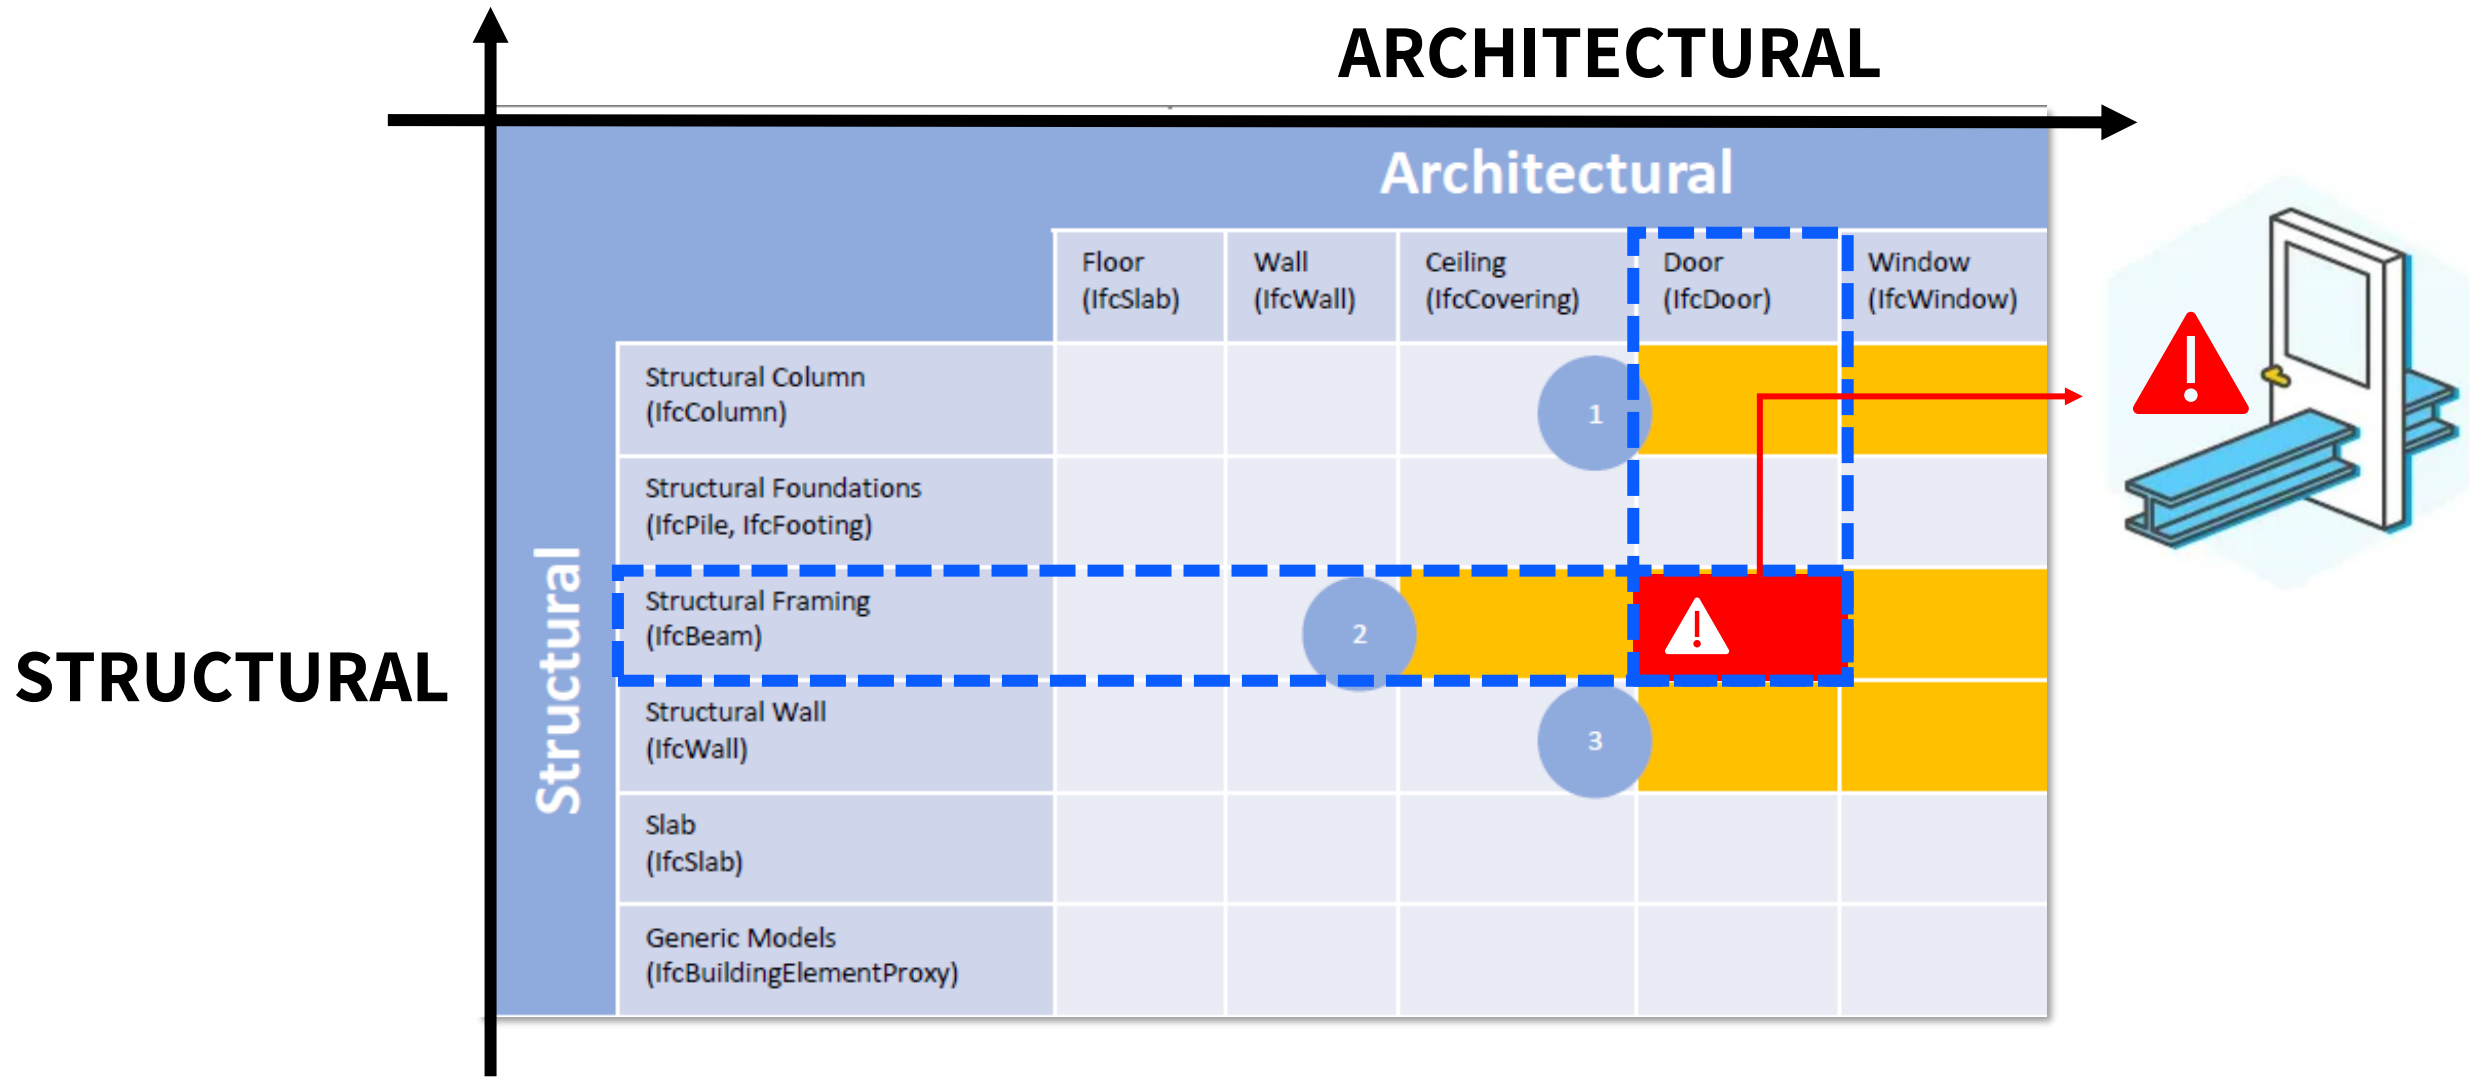

S2 – Fig 1 : Design Clash
Photo credit: <https://www.bimcollab.com/en/products/bimcollab-zoom-b/>

For example, the Architectural Door should not have a design clash with the Structural Beam

		Architectural					Structural				
		Floor (IfcSlab)	Wall (IfcWall)	Ceiling (IfcCovering)	Door (IfcDoor)	Window (IfcWindow)	Structural Column (IfcColumn)	Structural Foundation (IfcPile, IfcFooting)	Structural Framing (IfcBeam)	Structural Wall (IfcWall)	Slab (IfcSlab)
Structural	Structural Column (IfcColumn)				1						
	Structural Foundations (IfcPile, IfcFooting)										
	Structural Framing (IfcBeam)		2		3						
	Structural Wall (IfcWall)										
	Slab (IfcSlab)										
	Generic Models (IfcBuildingElementProxy)										
MEP	Mechanical Equipment (IfcTank, IfcPump, IfcUnitaryEquipment)		4								8
	Ducts (IfcDuctSegment)			5							9
	Air Terminals (IfcAirTerminal)										10
	Pipes (IfcPipeSegment)			6							11
	Plumbing Fixtures (IfcSanitaryTerminal)										12
	Cable Tray (IfcCableCarrierSegment)			7

Section 2: Typical Submission Package

Examples	Architecture	C&S Engineering	M&E Engineering
IFC-SG models, all geo-referenced	<ul style="list-style-type: none"> • Blk 1 Model • Blk 2 Model • Podium Model 	<ul style="list-style-type: none"> • Blk 1 Model • Blk 2 Model • Podium Model • Substructure Model <p>Note: For projects which did not opt for Piling Gateway (G1.5), the project team will need to include all permanent foundation works in Construction Gateway (G2).</p>	<ul style="list-style-type: none"> • Blk 1 and Substructure Model • Blk 2 and Substructure Model • Podium
2D drawings	<ul style="list-style-type: none"> • Details (e.g. household / storey shelter documentation and detailing) • External Works 	<ul style="list-style-type: none"> • General notes • Special details (e.g. slab reinforcement detailing, complex structure detailing, precast joints, prestressed details, steel connections) • External Works 	<ul style="list-style-type: none"> • Details (e.g. cooling tower documentation and detailing) • External Works
Design Calculation reports	-	<ul style="list-style-type: none"> • Design calculation reports from QP, AC, [QP(Geo) & AC (Geo), if needed] 	-
Additional supporting documents	<ul style="list-style-type: none"> • B-Score BDAS form • Bonus Balcony GFA Letter of Declaration • Design Advisory Panel (DAP) report • Green Mark Assessment and Score Card • Public Communication Plans 	<ul style="list-style-type: none"> • B-Score BDAS form • Site Investigation report in pdf & AGS format • Impact assessment report • Topography 	<ul style="list-style-type: none"> • B-Score BDAS form • Pollution Control Study (PCS) reports
Pre-consultation document	-	Completion letter of pre-consultation (for complex structure only)	-

Note: This is an example of a typical submission package, and is not exhaustive.

Section 2: General Requirements

Model Size and Preparation

- ✓ Total size of all models in a single submission should not exceed **2GB**.

Geo-Referencing

Singapore Height Datum (SHD)

Z

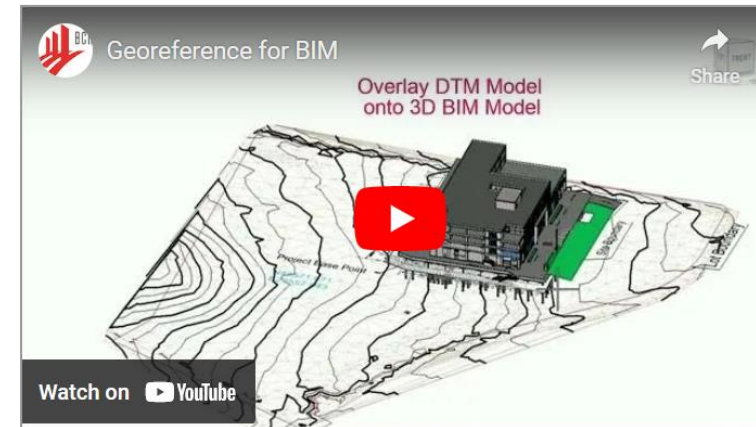

Singapore SVY21 Coordinate System (EPSG: 3414)

Why is there a need to Geo-Reference BIM models?

+ How do I geo-reference my BIM model?

The Singapore Institute of Surveyors and Valuers - Land Surveying Division has also come up with a video on geo-referencing, to explore how land surveyors and architects can work together to have more efficient workflow for future CORENET X submission.

*For details and video demo on geo-referencing, please visit the CX website.

Section 2: Preparing Models for Submission

1. Set your model into the agreed coordinates

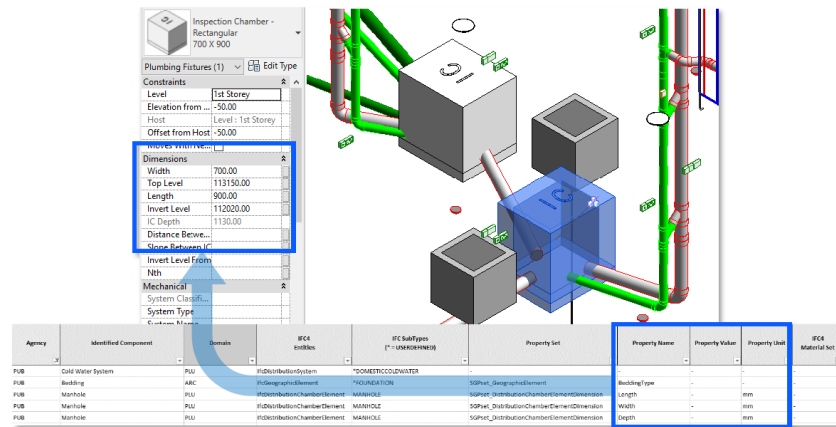

- To place model into the correct location with Architectural, Civil & Structural, Mechanical & Electrical models.

S2 - Fig 6

2. Identify the IFC properties to be tagged into each element of your model

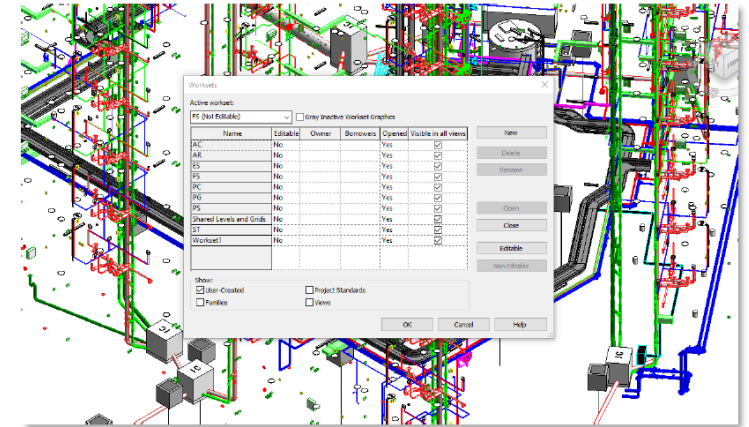

- Element's properties can be assigned while modeling.

S2 - Fig 7

3. Set the Revit Workset

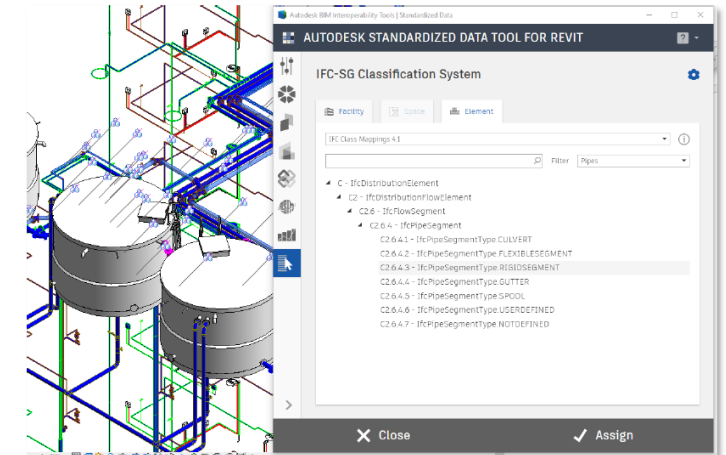

- To easily select the elements during IFC-SG Parameters mapping.
- To filter the views per Agency Submission.
- To reduce time when Exporting model in IFC format.
- To easily navigate when modeling and model auditing.

S2 - Fig 8

4. IFC-SG Mapping

- Use BIM Interoperability Tools to assign IFC parameters
- To avoid misspelled IFC parameters (misspelled parameters will not be exported).
- Faster than manual parameter key-in.
- Elements will be exported into the correct IFC category.

S2 - Fig 9

✓ Step-By-Step Tips (from Industry partners)

QP's Statutory Responsibilities

While the regulatory approval process is being redesigned to improve the current user experience to navigate across multiple regulatory agencies, the regulatory agencies' respective mandate and regime remains unchanged. Hence, the statutory responsibilities of the appointed QPs under the respective Acts and Regulations **remains unchanged.**

Under the RABW, part of the process requires joint submission by the relevant QPs within the project teams to the relevant regulatory agencies. To ensure clear delineation of responsibilities, the developer (or whoever is required under the respective Acts and Regulations) needs to first appoint the QP for the respective areas of work at the start of a project. The appointed QP will then be responsible for the relevant aspects of the submission.

I want to understand how to clear SCDF's requirement for Fire Hydrant

- 1 Go to Section 3: Specific Requirements Regulatory Agencies
- 2 Find which Gateway "Fire Hydrant" falls under. In this case, it's required under Construction Gateway (G2).
- 3 Find which discipline is responsible for compliance. In this case, it's Architecture and M&E (orange and yellow).
- 4 Find out what are the broad requirements to comply. However, QP is to refer to detailed codes & requirements in the appropriate docs (e.g. BC Act & Regulations)
- 5 Find out what BIM Data Representation is required to be modelled for "Fire Hydrant". Look for "Fire Hydrant" in Section 4.
- 6 Click Hyperlink to navigate easily to Section 4: BIM Data Representation.

Case Example (Regulatory Agencies)

Key Gateway with corresponding Gateway No.

Legend (Archi, C&S, M&E)

Key Words appearing in a particular Gateway

Help to show how different agency requirements can share the same requirement in different locations within the project

Directly linked to Section 4 on BIM Data Representation

Agencies involved for "Fire Hydrant"

Brief Description of requirements relating to the Key Word for that particular agency

BIM Components that may be required to be modelled for this requirement and key word

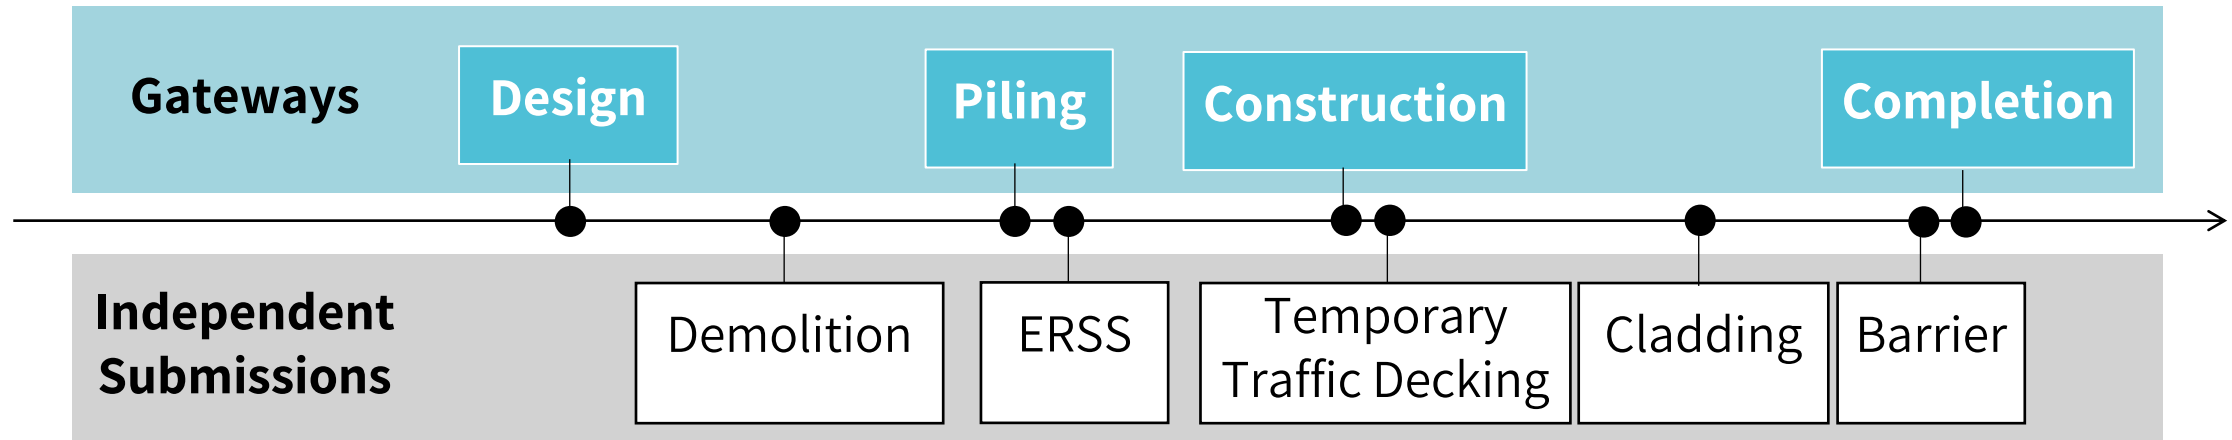

Understanding the Page and Table format (Key Gateways)

G	Gateways	Objectives
G1	Design Gateway (DG) For Design Parameters	To resolve multi-agency key parameters which have impact on design parameters and client's brief, before proceeding to detailed design.
G1.5	Piling Gateway (PG) *optional	To resolve requirements pertaining to piling and foundation works (e.g. pile caps, raft foundation, earth retaining and stabilising structures), excluding superstructural works.
G2	Construction Gateway (CG)	To resolve multi-agency requirements concerning design details that need to be coordinated before commencement of main structural works and launch of Sales.
-	Independent Submissions (IDP) *if applicable	To clear agency-specific requirements with no cross-agency dependencies (i.e. typically affecting only one relevant agency). E.g. structural submission of ancillary structures such as barriers/claddings to BCA
G3	Completion Gateway (TOP) Application for TOP/CSC	To document "As-Built" plans and obtain Occupancy Permit/ Statutory Completion

✓ Understanding the Key Gateway(s) outcomes

Example of a project making regulatory submissions

► External Works

External works (works adjacent to the site boundary) are to be coordinated and submitted as part of the Construction Gateway (G2) to agencies. Details include:

- Drainage and sewer improvements
- Roadside planting, reinstatement of landscaping
- Road improvement, provision of pedestrian facilities

External works details can be submitted in the 2D CAD format.

Example of a project making regulatory submissions

Section 4: BIM Data Representation

Identified Components

- ✓ Also known as “BIM Objects”, “Project Elements”
- ✓ List in the Draft COP is **not exhaustive**. More identified components will be added progressively.

Accessible Route

Legend: Architecture (orange), CAS (green), M&E (yellow)

Gateway Key Words	Agency	Requirement Category
Access to Site	BCA	Passenger Alighting and Boarding Point
Access within Building Only		Accessible Route and Maneuvering Space (Within the Development)
Connectivity		Accessible Route (To the Ingress / Egress of the Development Entrance)
Vehicular Parking		Accessible Vehicle Parking

Sensor

Legend: Architecture (orange), CAS (green), M&E (yellow)

Gateway Key Words	Agency	Requirement Category
Public Health	NEA	COPEN - Section 1: Refuse Storage and Collection
		1.1 - Objective
		1.2 - Refuse Output
		1.3 - Refuse Chute
		1.4 - Refuse Chute Chamber
		1.5 - Refuse Room
		1.6 - Refuse Bin Point and Refuse Bin Centre
		1.7 - Pneumatic Waste Conveyance System (PWCS)
		1.8 - Mandatory Waste Reporting Scheme
		1.9 - Location of Grease Trap
		1.10 - On-Site Food Waste Treatment System

Building Storey

Legend: Architecture (orange), CAS (green), M&E (yellow)

Gateway Key Words	Agency	Requirement Category
Building Housing	URA	Building Height
		• Floor-to-Floor Height & Aggregate Building Height
		• Additional Height for Protrusion On Terrace Storey
		• Overall Building Height Control (Inc. Building crown and M&E floor, if any)
		• Number of Storey

Site Boundary

Legend: Architecture (orange), CAS (green), M&E (yellow)

Gateway Key Words	Agency	Requirement Category
Site Layout Only	NParks	Securing of Land for PCN/Park use and/or Impact on Neighbouring Parks (e.g. embank sites)
		• To ensure the site boundary does not encroach into safeguarded park / park connectors shown in MP3/MP23
		• Some development applications might be received during the discussion to rezone proposed parks/park connectors thus affecting boundaries
	SCDF	Building Setback due to Unprotected Openings
		• Setback between buildings or to the relevant boundary due to the unprotected openings shall be computed and provided based on the setback table

Staircase

Legend: Architecture (orange), CAS (green), M&E (yellow)

Gateway Key Words	Agency	Requirement Category
Structural Design	BCA	Structural Design (Main Structural Elements of Building excl. Piling)
		• Complete set of IFC-SG model(s) for all structural framings & details
		• 2D drawings limited to the categories below: <ul style="list-style-type: none"> o General notes o Special details (e.g. slab reinforcement detailing, complex structure detailing, precast joints, prestressed details, steel connectors)

Tree

Modeling Tree in IFC-SG

As long as relevant IFC-SG requirements are embedded in the tree object, it is okay to model trees as simplified ballprop BIM components. We are mindful that more elaborate tree models can increase the size of the BIM model.

Section 4: Glossary of Identified Components

Section 4: BIM Data Representation (IFC-SG) and Modelling Good Practice Typical Components in a Project (“Identified Components”)

INTRODUCTION TO CI | GENERAL REQUIREMENTS | REGULATORY AGENCIES | PROJECT DISCIPLINES | KEY GATEWAYS | BIM DATA REPRESENTATION

Glossary of “Identified Components”

Section 4: BIM Data Representation (IFC-SG) and Modelling Good Practice Typical Components in a Project (“Identified Components”)

INTRODUCTION TO CX | GENERAL REQUIREMENTS | REGULATORY AGENCIES | PROJECT DISCIPLINES | KEY GATEWAYS | BIM DATA REPRESENTATION

Beam

1

Legend: Architecture (Orange), C&S (Green), M&E (Yellow)

► By Key Gateways

G1.5 Piling Gateway (optional)			
Gateway Key Words	Agency	Requirement Category	
Fire Compartmentation	SCDF	Can be provided at Piling Gateway (G1.5) or Construction Gateway (G2) • Element of Structure to check Fire Rating	
Structural Design	BCA	Structural Design (Piling and Foundation Works)	

2

G2 Construction Gateway			
Gateway Key Words	Agency	Requirement Category	
Fire Compartmentation	SCDF	Can be provided at Piling Gateway (G1.5) or Construction Gateway (G2) • Element of Structure to check Fire Rating	
Buildability	BCA	Buildability Design (Scoring) • B-Score Calculations	
Structural Design		Structural Design (Main Structural Elements of Building excl. Piling) • Complete set of IFC-SG model(s) for all structural framings & details • 2D drawings limited to the categories below: <ul style="list-style-type: none"> General notes Special details (e.g. slab reinforcement detailing, complex structure detailing, precast joints, prestressed details, steel connections.)

S4 - Fig 4: Concrete Rectangular Beam

4

← Back to Glossary

177

I want to understand how to model a “Beam” in my Native BIM software to satisfy IFC-SG requirements for CX submission

- 1 Go to Section 4: BIM Data Representation (IFC-SG) and Modelling Good Practice
- 2 Find out the Gateways, Agency and Requirements. These are replicated from earlier sections for ease of reference. In this case, “Beam” is required in Piling Gateway (G1.5) or Construction Gateway (G2) and is checked by BCA and SCDF.
- 3 Find out the recommended “Beam” modelling representation or good practice. As mentioned, QPs may model or represent in greater detail.
- 4 Clickable Hyperlink if one wishes to go back to the full glossary of “Identified Components”.

Section 4 Case Example: Beam

Beam Property Definition	
1	Every beam will be detailed based on 3 parts (left, middle & right) in accordance to its local building axis orientation (refer to Figure 5 below).
2	Starting point of a beam should be the smallest x coordinate of local building axis orientation in a span and denoted as left part of a beam.
3	Behaviour of the beam (single, end, interior & cantilever span) shall be indicated in the parameters called "BeamSpanType". Limitation of inputs for this parameter is applied. Please refer to list of input.

▶ Beam Property Definition (continued from previous page)

Beam Reinforcement Definition	
1	A set of typical beam reinforcement annotation is provided for reference.
2	QP may provide a set of 2D typical drawings to present typical beam reinforcement annotation based on the standardised IFC-SG parameter names.
3	The input for TopLeft, TopMiddle, TopRight, BottomLeft, BottomMiddle & BottomRight shall be "XXHXX" while "H" is a must, 1st XX is number of longitudinal reinforcement & 2nd XX is the reinforcement diameter <ul style="list-style-type: none"> Use '+' for more than 1 layer of reinforcement (e.g. 12H32+6H20)

Beam Reinforcement Definition	
4	The input for StirrupsLeft, StirrupsMiddle & StirrupsRight shall be "XXHXX-XXX" while "H" is a must, 1st XX is number of legs for transverse reinforcement, 2nd XX is the reinforcement diameters and XXX is the spacing of transverse reinforcement <ul style="list-style-type: none"> Use '+' for more than 1 layer of reinforcement (e.g. 4H10-100 : [4 denotes 4 legs])
5	Type of the beam stirrups (Normal link, U-link, C-link or torsion link) shall be indicated in the parameters called "StirrupType" based on beam part. Limitation of inputs for this parameter is applied. Please refer to list of input.

✓ Definitions and Diagrams to help the layman understand representation of a component in IFC-SG

Section 4 Case Example: Beam

► Example of Beam (Steel Beam) Structural Element Input

Steel Beam (UC254x254x63kg/m Steel Beam)		IFC Entity: IfcBeam	
		IFC USER-DEFINED SubType: N.A.	
S/N	IFC-SG Property	Examples	
1	BeamSpanType	Cantilever	
2	ConstructionMethod	PF	
3	SectionFabricationMethod	Hot Rolled	
4	Mark	SB1	
5	MemberSection	UC254x254x63kg/m	
6	MaterialGrade	S355	
7	LeftConnectionDetail	-	
8	LeftConnectionType	Free	
9	RightConnectionDetail	Typical connection of SB1 to C1 on dwg 19588-ST-DT-3	
10	RightConnectionType	Fixed	

- Mark – SB1
- Steel Grade S355 Hot Rolled
- Cantilever Span
- Fixed Connection to column at right part (Typical connection of SB1 to C1)

✓ Examples to further guide readers on specific IFC-SG parameters

What's Next ?

COP as part of CORENET X Training

RABW Training

Introduction to the Regulatory Approval Process via CORENET X

First run conducted on 05 May '23

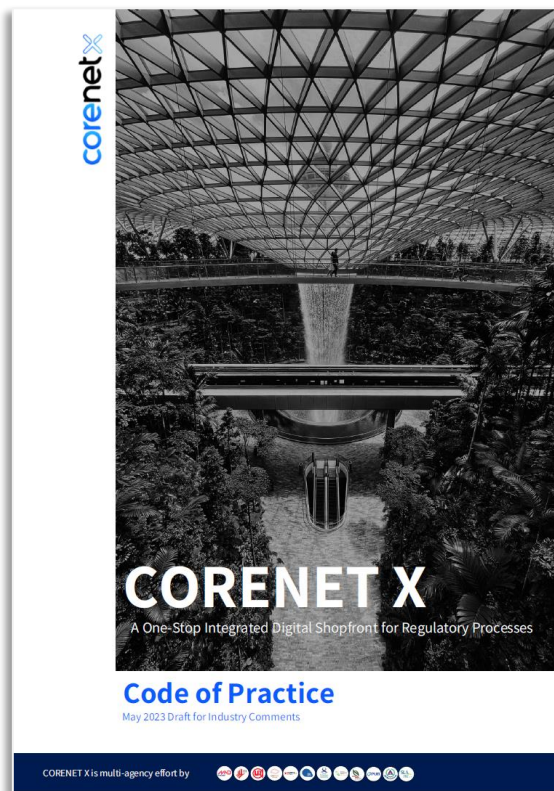

- ✓ WHY the key gateways are made in such a way
- ✓ Case studies on HOW a firm goes through the Design Gateway and Construction Gateway

WHAT are the details of 2D and 3D content needed in each RABW gateway

Understand the RABW outcomes in order to understand the requirements in the COP

How an IFC-SG BIM modelling component (e.g. slab, refuse chute) matters during a CX submission, in which particular gateway, to obtain what approval / compliance

Submission-related info

IFC-SG Training (Technical)

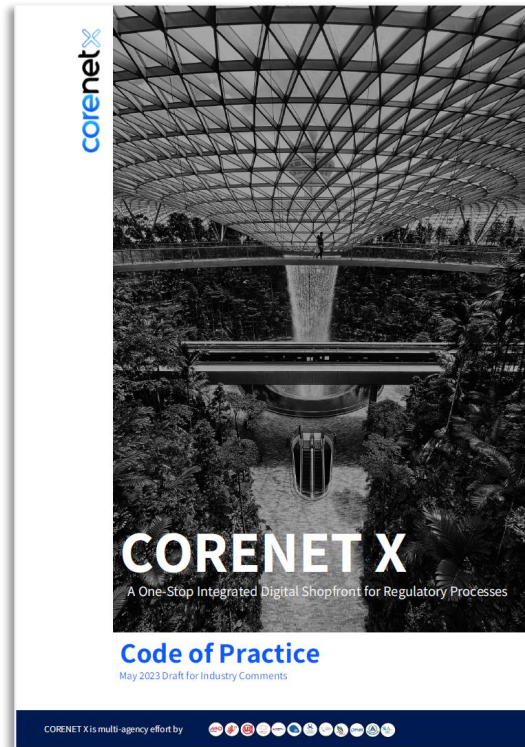

1-day course conducted by AcePLP, BIMAGE Consulting, Graphisoft

Kick-started since Aug '22

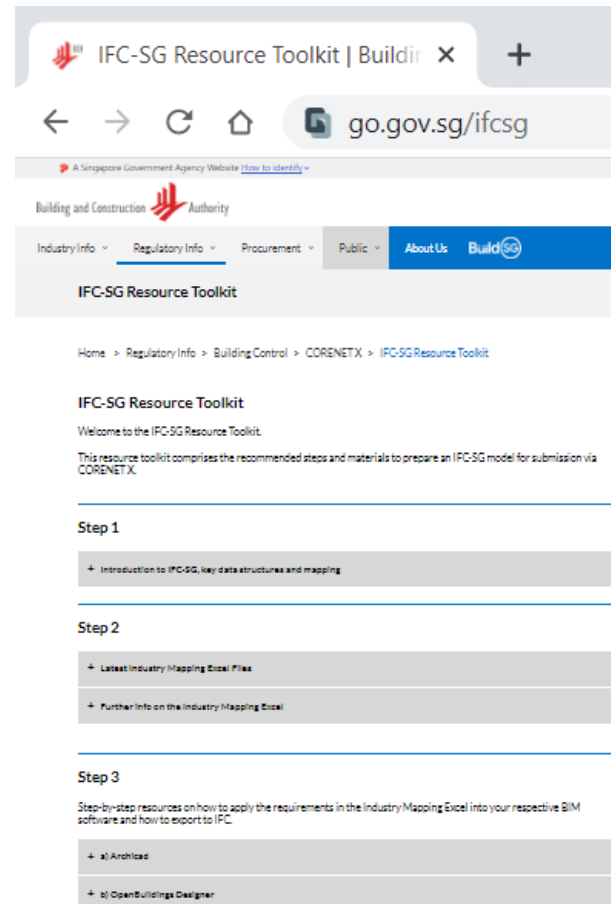

- ✓ Step-Sy-Step Modelling Guidance using Revit/ArchiCAD/Tekla
- ✓ How to read IFC-SG mapping requirements, creating the data in BIM software and exporting it into IFC successfully

Using COP together with the IFC-SG Resource Kit
